

“Brasiliens Strategie für Wasserstoff als Energiequelle“

Realitätscheck und Chancen für Brasilien und Deutschland

22. Mai 2023, Montag, 15h bis 18h
Alsterufer 1, 20354 Hamburg, Präsenzveranstaltung

Brazil aims to become a reference in energy supply for the world. And the conditions are good: the country already has a renewable energy matrix. What is the Brazilian hydrogen strategy and how is it being developed at the ministries and public agencies? One of the biggest challenges for all players is to optimize costs and have a truly green hydrogen supply chain.

How is the economy in Brazil gearing up for this future challenge and what are the win-win opportunities for German and Brazilian companies? We propose to do a reality check on the market, discussing our recent experience with companies in the industry and public stakeholders. Join us and bring your questions, comments, and experience!

This is a joint event of PwC, Felsberg and the Lateinamerika Verein.
